EXPERIENCE

Orion - Product Designer & Builder (Personal Project)

May 2026 - Aug 2026

- Designed and built a spatial music exploration tool that maps songs by audio features onto a 2D canvas, letting DJs discover harmonic relationships and build sets visually.
- Defined novel interaction patterns including zoom-responsive node morphing, socket-based set wiring with non-destructive editing, and BPM/Camelot compatibility scoring.
- Shipped end-to-end with React, React Flow, Three.js, and Claude Code; integrated three external APIs for audio analysis, artwork, and track resolution.

MyShake - Product Designer (Hybrid)

Jan 2024 - June 2026

- Proposed and led a dashboard-first redesign for a USGS-partnered earthquake early warning app with **4M+ users**, building the research case to align a hesitant lab director and stakeholders.
- Reduced early warning setup from **5 steps to 2-3** via dashboard shortcuts, cutting task clicks by **50%**.
- Improved key task completion time by **41% (2:47 to 1:38)** through three rounds of usability testing with 20 participants, including seniors at a retirement community.
- Ran a solo head-to-head round comparing old and new designs on the same participants: **ease of use rose from 2.0 to 4.75**, and 3 of 4 preferred the dashboard over the map-first alternative.

Polaris - Creative Designer (Contract)

Apr 2026 - May 2026

- Led 0-to-1 brand identity, marketing site, and AI intake agent UI for a SkyDeck-backed creator-brand activation platform; deliverables used in pitches to Pear VC, Y Combinator, and a16z.
- Designed and built a React landing page using Claude Code that drove **200 creator signups** in its first week of launch; modeled and rendered 3D brand assets in Blender.

GoodNotes - Product Designer (Designathon + Independent)

Apr 2025 - Jan 2026

- Placed **3rd of 17** teams in a UC Berkeley designathon for GoodNotes (**25M+ users**), then continued independently - pivoting direction based on research with 20+ students and 5 educators.
- Designed Group Canvas, a real-time collaborative experience with shared synthesis, focus timers, and presence indicators; a GoodNotes user researcher reached out, comparing it directly to their internal education product.

JellyJelly - Product Designer (Contract)

Jan 2025 - May 2025

- Designed a companion character system to increase daily engagement through progression-based interactions for a Web3 social app by Venmo co-founder (**\$250M+ token launch**).
- Redesigned the user profile experience and created a new crypto wallet interface to streamline in-app transactions.

EDUCATION

University of California, Berkeley - B.A. in Cognitive Science

Aug 2023 - Jan 2026

SKILLS

Design & Tools: Product Design, UX/UI, Interaction Design, Visual Design, Design Systems, Figma (advanced), Blender, Adobe Creative Suite, HTML/CSS/JS, Claude Code, Prototyping, Wireframing, Information Architecture, Accessibility

Research & Strategy: Usability Testing, User Interviews, Competitive Analysis, Journey Mapping, A/B Testing, Stakeholder Management, Cognitive Walkthrough

Projects: MoceanVault - **18+** micro-interaction components exploring motion and UI transitions (moceanvault.vercel.app)
